SUMMARY

Backend developer focused on Node.js, NestJS, TypeScript and PostgreSQL. I built and shipped Nexio, a full stack ordering platform with idempotent payments, DDD and CI/CD with Docker. I'm currently building zNuvo, an event-driven multi-tenant SaaS with NestJS, Go, NATS and PostgreSQL Row-Level Security. At cVortex, I build automations that save ~20 hours a week and integrate LLMs with tool calling and RAG.

TECHNICAL SKILLS

Backend: Node.js, NestJS, TypeScript, Python, REST, gRPC, Go (learning)
Databases: PostgreSQL, Prisma, Drizzle, SQL, Redis
DevOps & Tooling: Docker, Docker Compose, Git, CI/CD (GitHub Actions), Linux, WSL, NATS JetStream
Frontend: React, Next.js, Tailwind
Concepts: Clean Architecture, DDD, SOLID, Dependency Injection, Repository Pattern, Idempotency, Event-Driven Architecture, LLMs (tool calling, RAG), Testing (Jest, Vitest), Authentication & Authorization (JWT, OIDC)

EXPERIENCE

Support Analyst Feb 2026 - Present
cVortex - AI-powered omnichannel SaaS platform

- Built internal automations and applications in Python and Node.js/NestJS that integrate systems and remove recurring manual platform setup, saving the team about 20 hours a week.
- Consume and configure LLM API integrations in the platform's AI agents: tool calling with function declarations, RAG over knowledge bases and prompt improvements applied to real customer cases.
- Integrate REST and GraphQL APIs and use SQL to investigate product issues in production.
- Diagnose and resolve issues in complex platform workflows, together with product and engineering.

PROJECTS

Nexio - Restaurant Ordering Platform (Full Stack) Live MVP

Backend: NestJS, TypeScript, PostgreSQL, Prisma, Jest, Docker, Swagger · Frontend: Next.js, React, Tailwind, Zustand, Vitest
Demo: nexio-frontend-wheat.vercel.app
github.com/M4rcosz/nexio-core · github.com/M4rcosz/nexio-frontend

- API for a multi-unit restaurant chain (omnichannel orders, payments, inventory, promotions and loyalty) with Clean Architecture and DDD per bounded context - a pure domain with no framework dependency.
- Payments with a signed webhook (HMAC) as the source of truth: an idempotent, transactional flow protected against double charging; a decimal-safe money pipeline (no floats).
- Orders with server-side price validation (anti-tampering), optimistic locking on status transitions and atomic stock deduction; JWT auth with refresh token rotation and reuse detection.
- AI assistant (Gemini) with per-user token metering, a bilingual (PT/EN) Next.js frontend and Docker deployment on Render + Supabase, with CI on GitHub Actions.

zNuvo - Omnichannel Customer Support SaaS In development

NestJS (Fastify), Go, PostgreSQL, Drizzle, Redis, NATS JetStream, gRPC/Protobuf, Docker, GitHub Actions, OpenTelemetry
Private repository - code available on request

- Multi-tenant support chat (web widget; WhatsApp and Instagram planned): a REST API in NestJS with OpenAPI and a realtime service in Go over WebSocket.
- Tenant isolation with PostgreSQL Row-Level Security, least-privilege database roles, OIDC (PKCE) authentication with Zitadel and permissions per organizational unit.
- Event-driven architecture: a transactional outbox publishing to NATS JetStream and gRPC between services with versioned Protobuf contracts.
- CI on GitHub Actions; tests with Vitest, Testcontainers, Playwright and k6; observability with OpenTelemetry and Grafana.

EDUCATION & LANGUAGES

Associate Degree in Systems Analysis and Development - UNINTER · Mar 2024 - Dec 2026 (expected)
Portuguese - Native | English - Advanced (technical)
